

Front End Developer – Web Agency

Location:	Remote & Stevenage, Herts
Salary:	£25,000-£40,000 p.a. depending on experience
Job Type:	Full time permanent
Experience:	2+ years
Educational Level:	Relevant qualifications and experience

A well-established web development agency based in Hertfordshire is currently seeking a highly motivated Front End Developer to join their growing team. The agency has been established for +10 years and offers expert web design, bespoke development and digital marketing services to medium sized companies in the UK.

This is a great opportunity to work within an energetic and professional agency with a friendly but incredibly hardworking team.

The role is full time and permanent, reporting to our highly experienced Technical Director, with real opportunities to learn and grow towards a senior position.

The ideal candidate will be hard-working, reliable, professional and fit in as part of our dedicated team.

Benefits:

E Marketing Support Ltd is a dynamic, stimulating and energetic company to work for. We only offer genuinely outstanding web and digital marketing services to our clients, so we only employ the very best staff. And once we've employed them, we look after them.

- Remote working (in-person meetings approx every 2 weeks in Hertfordshire)
- Team events
- Some flexibility in working hours
- Smart casual dress code
- Open door culture

Front End Developer Job Description

Job Summary

The Front End Developer uses expertise and experience to produce front end work on a wide variety of web projects. Working with confidence and professionalism, they will maintain high standards ensuring the quality of web development services delivered to our clients.

With a responsibility for the quality of work they produce, they will be accountable for delivery of projects according to agreed timescales as well as ensuring code is well-constructed, secure and suitable for the specific application.

A good understanding of front end development technologies and browsers is essential. The Front End Developer is a key position in a small Development Team at our agency, so they should expect to be involved in technical decisions, sharing knowledge and maintaining excellent relationships with colleagues.

Note: this is a work-from-home position. You will need to carry out your work from within the UK. You will need to have reliable high-speed Internet access wherever you are working from. A suitable PC and any other necessary equipment will be supplied. Hours are flexible, however you must be generally available during our core business hours.

Primary Responsibilities:

- Create website front-ends and web services using HTML, JavaScript and CSS, and open-source libraries
- Work with the team to update and maintain content on existing websites.
- Integrate front-ends with existing back-ends, making minor changes to existing PHP code as appropriate.
- Participate in development processes from specification and design through build to testing, release and maintenance.
- Break down problems into viable actionable chunks, and solve them with clarity and precision
- Deliver projects according to agreed timescales

Qualifications, Skills, Experience:

Essential:

- Good foundation in HTML & CSS, confidence in creating pages from flat designs
- Experience working with Wordpress, a good understanding of how Wordpress is structured and how to maintain / update Wordpress installations and plugins
- Knowledge of JavaScript and ability to self-teach as required on the job, with support from the Technical Director
- Analytical and methodical with strong problem-solving skills
- Enthusiastic, with a desire to learn and expand knowledge

- Self-starter able to make progress with minimal supervision, seeks help when required
- Good communication skills – friendly, polite and approachable. Able to keep colleagues informed of progress and through remote meetings and instant messaging.

Desirable:

- Related degree or other appropriate qualifications
- Some experience with back-end web languages, specifically PHP
- Familiarity with web server configuration, in particular for Apache servers
- Understanding of version control systems - preferably Git
